

GBR-182 Series

Characteristic

GBR-182 series resistors are made in a thick film technology, on ceramic substrates (Al_2O_3 - 96%). Thick film resistors are characterized by a higher stability, and lower noises than a typical carbon resistors. The whole of resistor is encapsulated with epoxy resin by fluidization process. GBR-182 series elements are used both for general, and professional applications. Other values of resistance, and tolerance (up to 0,1%) are available on request.
